# **NumPy Exercises**

Now that we've learned about NumPy let's test your knowledge. We'll start off with a few simple tasks, and then you'll be asked some more complicated questions.

## Import NumPy as np

```
In [1]: import numpy as np
```

## Create an array of 10 zeros

```
In [2]: array = np.zeros(10)
array

Out[2]: array([0., 0., 0., 0., 0., 0., 0., 0., 0.])
```

## Create an array of 10 ones

```
In [3]: array = np.ones(10)
array
```

```
Out[3]: array([1., 1., 1., 1., 1., 1., 1., 1., 1.])
```

### Create an array of 10 fives

```
In [4]: array = np.full(10, 5)
array
Out[4]: array([5, 5, 5, 5, 5, 5, 5, 5])
```

#### Create an array of the integers from 10 to 50

### Create an array of all the even integers from 10 to 50

44, 45, 46, 47, 48, 49, 50])

```
In [6]: array = np.arange(10,51,2)
array
```

```
Out[6]: array([10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42, 44, 46, 48, 50])
```

## Create a 3x3 matrix with values ranging from 0 to 8

#### Create a 3x3 identity matrix

#### Use NumPy to generate a random number between 0 and 1

```
In [9]: array = np.random.rand(1)
array
```

## Out[9]: array([0.05987984])

# Use NumPy to generate an array of 25 random numbers sampled from a standard normal distribution

#### Create the following matrix:

## Create an array of 20 linearly spaced points between 0 and 1:

## **Numpy Indexing and Selection**

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

```
In [13]: mat = np.arange(1,26).reshape(5,5)
         mat
                                  5],
Out[13]: array([[ 1, 2, 3,
                              4,
                [6, 7, 8, 9, 10],
                [11, 12, 13, 14, 15],
                [16, 17, 18, 19, 20],
                [21, 22, 23, 24, 25]])
In [14]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
         matrix = np.arange(12,26)
         matrix = np.delete(matrix, 4)
         matrix = np.delete(matrix, 8)
         matrix = matrix.reshape(3, 4)
         matrix
Out[14]: array([[12, 13, 14, 15],
                [17, 18, 19, 20],
                [22, 23, 24, 25]])
```

```
In [0]:
Out[40]: array([[12, 13, 14, 15],
                [17, 18, 19, 20],
                [22, 23, 24, 25]])
In [15]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
         value = matrix[1,3]
         value
Out[15]: 20
In [0]:
Out[41]: 20
In [16]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
         matrix = np.arange(2, 13, 5).reshape(3,1)
         matrix
Out[16]: array([[ 2],
                [7],
                [12]])
In [0]:
Out[42]: array([[ 2],
                [7],
                [12]])
In [17]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
         matrix = np.arange(21, 26, 1)
         matrix
Out[17]: array([21, 22, 23, 24, 25])
In [0]:
Out[46]: array([21, 22, 23, 24, 25])
```

## Now do the following

## Get the sum of all the values in mat

```
In [19]: sum = np.sum(mat)
sum
Out[19]: 325
```

## Get the standard deviation of the values in mat

```
In [20]: std = np.std(mat)
std
```

Out[20]: 7.211102550927978

#### Get the sum of all the columns in mat

```
In [21]: sum = np.sum(mat, 0)
sum
```

Out[21]: array([55, 60, 65, 70, 75])
